

# About **ORION** **COMMUNICATIONS**

## **Building the Future - communication**

- As a discipline, Orion communication explores the interactions of people and examines how social context and technologies shape individual decisions and broader outcomes. The pervasive integration of social media and virtual interactions in society has dynamically expanded our field of study and places our research at the nexus of pressing social and policy issues. We are grounded in the theoretical strength and methodological rigor of the social sciences, and are engaged in grounded empirical study.

# Domain Registration

# Web Hosting

Is the act of reserving a name on the Internet for a certain period, usually one year. It is important to know that this domain will remain yours for as long as you renew it and there is no way to purchase a domain name forever.

- The most important thing about a domain name registration is that it gives you personality and recognized identity. Once you register a domain name, the information about its owner is available.
- The price for a domain name registration varies greatly on its extension. For example, the most common .com is the most affordable one, while some country-specific domain name extensions are 5 times more expensive. For detailed information about domain name prices, please contact us.

A service provider that offers shared hosting or dedicated hosting of a service or services to customers. Hosting services are most often used for hosting Web sites but can also be used for hosting files, images, games and similar content.

- Without the hosting services, you won't have a place for your files to reside, so your domain would then become like a disconnected phone number in the phone directory, and your site files would have nowhere to stay.
- One of Orion' strengths is our ability to adapt to customers own particular requirements for hosting services. We Offer Business Plans for Companies & Establishments and Personal Hosting Plan for individual and small businesses. We offer Windows and Linux based web hosting services.

# Software Development

*We have expertise in building Enterprise class software solutions using technology from Microsoft, Oracle and Java Platforms.*

- Whether you have a start-up project to launch, an idea for a custom software solution for your company, or you are engaged in software product development, Orion Communications is ready to provide full-cycle software development services at each stage of your project.*

*Orion Communications services include :*

- *Local Area Network*
- *Wide Area Network.*

*Unified communications is an industry term used to describe all forms of call and multimedia/cross-media message-management functions controlled by an individual user for both business and social purposes. This includes any enterprise informational or transactional application process that emulates a human user and uses a single, content-independent personal messaging channel (mailbox) for contact access.*
